

Wall Mount Unit Optional Accessory

WMAP Description

Bebco Model WMAP Wall Mount Adapter Plates are accessories to permit the installation of Model TAC and THP Through Wall & Window Mount Units, Model WAC and WHP Wall Mount Air Conditioners & Heat Pumps, Model WDP Wall Mount Building Pressurization Units and Model WVF Wall Mount Ventilation Fans through oversized existing openings in your building or room wall.

These Adapter Plates are custom built to order, may be provided as a single plate or paired set, can be fabricated from aluminum, carbon steel, or 304 or 316 grade stainless steel, and can be provided with any type of paint finish desired.

Specifications

Size:	Custom Built To Order
Quantity per Cutout:	1 or 2, per Client Specifications
Materials:	12 Gauge Aluminum 12 Gauge Carbon Steel 12 Gauge 304 Grade Stainless Steel 12 Gauge 316 Grade Stainless Steel
Finish:	Per Client Specifications

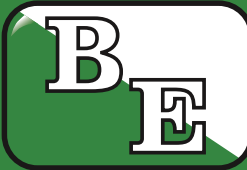

IMPORTANT NOTES:

1. As illustrated to the right, Bebco recommends that the adapter plate(s) are designed to permit our installed unit to rest upon the bottom edge of the existing opening. However, a final decision regarding the best installation method is left to your discretion.
2. Due to the nature of this unique custom-built accessory, Bebco relies on clients to provide all critical dimensions of the existing opening and to ensure that the opening is framed in such a manner as to adequately support the attachment of these adapter plates and that the wall will bear the weight of the adapter plates combined with the unit to be installed.
3. Bebco strongly recommends assessment and certification for WMAP installations by a Structural Engineer, and accordingly makes no warranties nor accepts any liability for ability of a building or room wall to provide adequate structural support.

Installation Considerations

As noted above, Bebco Model WMAP Wall Mount Adapter Plates may be provided as a single plate for the interior or exterior wall surface, or as two plates for both walls surfaces.

Consideration of environmental factors, such as direct exposure to rain or the climate control of the room or building should be carefully considered before selecting the quantity of plates to be installed. When two plates are installed, clients may elect to insulate the cavity remaining around the installed unit to increase energy efficiency of the building or room.
